

Selenium with Python Installation Process

Procedure #1

To install Selenium for Python using PyCharm, follow these steps:

1. Open PyCharm:

- Start PyCharm and open your project or create a new one.

2. Open the Project Interpreter:

- Go to File > Settings (or PyCharm > Preferences on macOS).
- In the Settings/Preferences dialog, navigate to Project: <your_project_name> > Python Interpreter.

3. Install Selenium:

- Click the + icon on the right side of the interpreter list to add a new package.
- In the search bar, type selenium.
- Select the selenium package from the list and click Install Package.

4. Verify Installation:

- After the installation is complete, you should see selenium listed in the installed packages for your interpreter.
- You can verify the installation by importing Selenium in your Python code. Open a Python file and add the following line
